

FLETCHER HARTSOCK

Full Stack Software Engineer | Systems Integration Engineer • Enterprise Applications, APIs & Cloud Systems • Charlotte, NC •
fletchhartsock93@gmail.com • 724-557-9213 • <https://fletcher-website.vercel.app>

PROFESSIONAL SUMMARY

Computer Science graduate with experience designing, developing, integrating, and supporting business-critical software systems across multiple platforms. Skilled in full stack development, enterprise application integration, API design, database management, cloud-based systems, and technical problem solving.

Hands-on experience building internal business applications, automating operational workflows, integrating third-party platforms, designing scalable data solutions, and supporting software deployments in production environments. Strong foundation in software architecture principles, distributed systems, relational databases, and modern web technologies.

Passionate about building reliable, scalable systems that improve operational efficiency, simplify business processes, and create exceptional user experiences.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL

Frontend Development: React, Next.js, HTML, CSS, Responsive Design

Backend Development: Node.js, REST APIs, API Integration, Authentication, Business Logic Development

Databases: PostgreSQL, Supabase, SQL Query Development, Data Modeling, Data Validation

Cloud & DevOps: Git, Linux, Cloud Platforms, Deployment Management, CI/CD Concepts

Systems Integration: REST APIs, Third-Party Integrations, Data Synchronization, Workflow Automation

Software Engineering: System Design, Application Architecture, Debugging, Root Cause Analysis, Performance Optimization, Technical Documentation

Professional Skills: Stakeholder Communication, Cross-Functional Collaboration, Technical Leadership, Project Coordination

PROFESSIONAL EXPERIENCE

Systems Integration Engineer

Millie's Homemade Ice Cream | May 2025 – Present

- Lead the design and implementation of internal software systems supporting operations across a growing multi-location organization
- Architect integrations between Square, WordPress, Supabase, internal applications, and third-party platforms
- Develop and maintain scalable data workflows supporting reporting, analytics, operational management, and business intelligence
- Design database structures, reporting solutions, and automation processes to improve operational efficiency
- Troubleshoot and resolve complex production issues involving APIs, databases, integrations, and application workflows
- Collaborate with developers, business stakeholders, and vendors to define requirements and implement technical solutions
- Support deployment, testing, validation, and ongoing enhancement of critical business applications
- Produce technical documentation, system specifications, implementation procedures, and operational workflows

Technology Solutions Engineer

Auto Max Chrysler Dodge Jeep Ram | Dec 2022 – May 2025

- Designed and developed custom software solutions supporting dealership operations, inventory management, reporting, and workflow automation
- Built business applications and reporting systems used by sales, finance, service, and management teams
- Developed automated workflows and integrations that improved efficiency and reduced manual processes
- Created dashboards and operational reporting tools utilizing SQL and business data sources
- Collaborated directly with leadership to identify technology needs and design scalable software solutions
- Supported software deployments, user adoption, troubleshooting, and ongoing system enhancements
- Maintained technical documentation and software process standards

PROJECTS

Millie's Manager | Enterprise Operations Platform

- Designed and developed a centralized operations platform supporting reporting, permissions management, audit logging, operational workflows, and business analytics
- Architected integrations between internal applications, APIs, and data platforms
- Developed scalable database structures and reporting solutions supporting business operations
- Implemented authentication, role-based access controls, and operational management features
- Collaborated with stakeholders to gather requirements and deliver business-critical functionality

Technologies: Next.js, TypeScript, PostgreSQL, Supabase, REST APIs, Git

E-Commerce & Order Management Platform

- Designed and implemented backend workflows supporting payment processing, inventory synchronization, order management, and operational reporting
- Integrated multiple business systems through API-driven architecture
- Built reporting and analytics capabilities supporting operational decision-making
- Developed automation tools that reduced manual processing and improved data accuracy

Technologies: Node.js, PostgreSQL, REST APIs, Square APIs

Business Systems & API Integration Projects

- Developed and integrated REST-based services supporting business operations and data exchange

- Designed database queries and validation processes to ensure reporting accuracy and data integrity
- Built automation tools and workflows supporting operational efficiency
- Participated in application design, testing, deployment, and support activities

Technologies: JavaScript, TypeScript, SQL, REST APIs

EDUCATION

West Virginia University

Bachelor of Science in Computer Science | 2021 – 2025

EcoCAR EV Challenge | Systems Integration & Validation Engineer

- Performed CAN Bus diagnostics, telemetry analysis, and systems integration testing for advanced vehicle technologies
- Validated communication between sensors, vehicle subsystems, and electronic control units
- Analyzed system data and performance metrics to support troubleshooting and validation efforts
- Collaborated with multidisciplinary engineering teams to support system integration and testing activities
- Conducted hardware and software validation testing across interconnected vehicle systems

Technologies: CAN Bus, Vehicle Telemetry, Hardware Validation, Sensor Integration, Diagnostics, Data Acquisition
