

FLETCHER HARTSOCK

Field Systems Engineer • Systems Integration • Technical Operations • Charlotte, NC (Relocating) • fletchhartsock93@gmail.com • 724-557-9213 • fletcher-website.vercel.app

PROFESSIONAL SUMMARY

Systems Integration Engineer with experience deploying and supporting operational technology systems across multi-location environments. Skilled in technical troubleshooting, systems integration, workflow automation, deployment coordination, and operational support.

Experienced working directly with operations teams, leadership, and technical stakeholders to implement scalable systems, resolve production issues, and improve operational reliability. Strong background supporting live operational environments, coordinating technical deployments, troubleshooting infrastructure issues, and translating business workflows into scalable technical solutions.

TECHNICAL SKILLS

Languages & Technologies: Python, TypeScript, JavaScript, SQL, Java, C, Node.js, React, Next.js

Systems & Infrastructure: REST APIs, PostgreSQL, Supabase, Linux, Docker, Git, Render, Authentication Systems, Role-Based Access Control

Industrial & Hardware Experience: PLC Fundamentals, Sensor Systems, Hardware Troubleshooting, Embedded Systems Concepts, Basic Electrical Systems, Soldering, System Diagnostics, Hardware Installation & Testing

Enterprise & Operational Systems: Square POS, NetSuite, Oracle, WordPress REST API, Zapier, CRM Platforms, Google Business Systems

Technical Focus Areas: Systems Integration, Technical Troubleshooting, Workflow Automation, Production Deployments, Operational Reporting, API Synchronization, Deployment Coordination, Platform Operations

PROFESSIONAL EXPERIENCE

Systems Integration Engineer | Formerly Systems Analyst, Millie's Homemade Ice Cream

May 2025 — Present

- Deployed and supported operational management systems across franchise and corporate business environments
- Coordinated production deployments, DNS migrations, SSL configuration, and infrastructure troubleshooting for live operational systems
- Built synchronization workflows between Square APIs, WordPress REST APIs, Supabase, and operational reporting systems
- Supported troubleshooting and remediation of production issues impacting operational continuity across multiple locations
- Developed automation workflows using Python and Zapier to improve operational efficiency and reduce manual administrative processes
- Built SQL-based operational reporting pipelines supporting financial reconciliation, forecasting, and operational visibility
- Coordinated cross-functional implementation efforts involving operations, finance, marketing, and executive leadership teams
- Implemented role-based access controls, audit logging systems, and operational permissions infrastructure
- Assisted with hardware troubleshooting, peripheral device configuration, and operational systems support
- Supported deployment testing, validation workflows, and operational rollout procedures

Operations Technology Coordinator, Auto Max Chrysler Dodge Jeep Ram

Dec 2022 — May 2025

- Coordinated operational systems and workflows across sales, service, finance, and inventory departments
- Supported troubleshooting and operational issue resolution across dealership systems and reporting workflows
- Worked directly with leadership, staff, and customers to resolve operational and technical issues
- Analyzed operational and inventory data to support forecasting, purchasing decisions, and process optimization
- Assisted with onboarding, operational systems training, and workflow standardization initiatives
- Acted as a liaison between technical systems, dealership operations, and customer-facing teams
- Assisted with hardware setup, system configuration, and troubleshooting of operational equipment and peripherals

PROJECTS

Millie's Manager | Internal Operations Platform

- Built and deployed a multi-location operational management platform supporting franchise and corporate store operations
- Implemented business hours synchronization, operational announcements, audit logging, and role-based permissions
- Integrated workflows across Square, WordPress, Google Business systems, and operational reporting infrastructure
- Coordinated deployment infrastructure and operational rollout support for production systems
- Developed mobile-friendly operational dashboards hosted in production environments

Technologies: Next.js, TypeScript, Supabase, PostgreSQL, REST APIs, Render

Custom E-Commerce Operations Platform

- Implemented operational e-commerce systems integrating payments, inventory workflows, reporting, and administrative tooling
- Developed backend operational logic supporting order synchronization and operational visibility
- Coordinated deployment workflows and infrastructure support for production environments

Technologies: Next.js, PostgreSQL, Square APIs, Supabase, REST APIs

Automotive Customer Engagement & Campaign Automation Platform

- Designed operational workflow automation systems supporting customer communication and dealership engagement initiatives
- Built automated workflows using customer service history, service intervals, ownership timelines, and operational data
- Coordinated integrations between dealership operational systems and communication platforms
- Improved operational efficiency by reducing manual campaign management and workflow overhead

Technologies: CRM Platforms, Workflow Automation, Data Analysis, Operational Reporting

EcoCAR EV Challenge Participant

- Participated in cross-functional engineering and vehicle systems initiatives through West Virginia University's EcoCAR program
- Worked with sensors, embedded systems concepts, hardware diagnostics, and vehicle technology workflows
- Assisted with technical troubleshooting and systems testing within collaborative engineering environments
- Experience soldering, assembling, and troubleshooting electronic hardware components and wiring connections
- Collaborated within technical environments involving vehicle systems, engineering processes, and operational coordination

EDUCATION

West Virginia University, Bachelor of Science in Computer Science

2021 — 2025

ADDITIONAL INFORMATION

- Willing to travel up to 75%
- Valid driver's license and reliable transportation
- Comfortable supporting field and operational environments
- Eligible to obtain a U.S. Passport
- Experience presenting technical concepts to technical and non-technical stakeholders
- Strong background supporting live operational systems in fast-paced environments
