

FLETCHER HARTSOCK

Systems Integration Engineer • Solutions Engineer • Operations Technology • Charlotte, NC (Relocating) •
fletchhartsock93@gmail.com • 724-557-9213 • fletcher-website.vercel.app

PROFESSIONAL SUMMARY

Systems-focused engineer with experience architecting and deploying operational software platforms that connect APIs, business workflows, and enterprise systems across multi-location environments. Experienced in workflow automation, backend systems, systems integration, operational tooling, and platform reliability using modern full-stack technologies.

Strong background in translating real-world operational processes into scalable technical systems that improve efficiency, visibility, and reliability. Proven ability to work cross-functionally with leadership, finance, operations, marketing, and franchise stakeholders to implement production-ready solutions.

TECHNICAL SKILLS

Languages & Frameworks: Python, TypeScript, JavaScript, SQL, Java, C, Node.js, Express.js, React, Next.js

Systems & Infrastructure: REST APIs, PostgreSQL, Supabase, Docker, Git, Linux, Render, Authentication Systems, Role-Based Access Control

Enterprise & Business Systems: Square POS, NetSuite, Oracle, WordPress REST API, Zapier, Google Business Workflows, CRM Platforms

Engineering Focus Areas: Systems Integration, Workflow Automation, API Synchronization, Internal Tooling, Data Pipelines, Production Deployments, Operational Reporting, Platform Operations

PROFESSIONAL EXPERIENCE

Systems Integration Engineer, Millie's Homemade Ice Cream

Aug 2025 — Present

- Architected and deployed a multi-location operational management platform used across franchise and corporate environments to manage business hours, flavor publishing, training resources, announcements, and operational workflows
- Designed synchronization systems between Square APIs, WordPress REST APIs, Supabase, and Google Business workflows to centralize operational management
- Built role-based authentication systems, audit logging infrastructure, and location-scoped permissions to improve platform security and operational accountability
- Developed automation pipelines using Python and Zapier to streamline operational workflows and reduce manual administrative work across multiple locations
- Coordinated production deployments, DNS migrations, SSL configuration, and infrastructure troubleshooting on Render-hosted systems
- Built SQL-based operational reporting pipelines to support forecasting, operational visibility, and financial reconciliation workflows
- Led cross-functional implementation efforts involving franchise operations, finance, marketing, and executive leadership teams
- Reduced operational inconsistencies by centralizing configuration management across POS, e-commerce, and online ordering systems

Systems Analyst, Millie's Homemade Ice Cream

May 2025 — Aug 2025

- Analyzed operational workflows and translated business requirements into scalable technical configurations across POS, e-commerce, and ordering systems
- Supported deployment validation, testing workflows, and production issue resolution during operational system rollouts
- Documented internal workflows, training procedures, and technical configurations to improve adoption and operational consistency
- Improved reporting accuracy and operational reliability by identifying data inconsistencies and implementing process improvements

Operations Technology Coordinator, Auto Max Chrysler Dodge Jeep Ram

Dec 2022 — May 2025

- Managed dealership operational systems and coordinated workflows across sales, service, finance, and inventory operations
- Analyzed operational and inventory data to support purchasing decisions, forecasting, and process optimization
- Improved reporting accuracy and operational efficiency through standardized workflows and system usage improvements
- Acted as a liaison between technical systems, dealership operations, customers, and leadership teams
- Supported staff onboarding and operational system training across multiple business functions

PROJECTS

Millie's Manager | Internal Operations Platform

- Built a production operational management platform for franchise and corporate store operations using Next.js, React, TypeScript, Supabase, and Square APIs
- Implemented location-level flavor management, business hours synchronization, operational announcements, audit logging, and role-based permissions
- Integrated operational workflows across Square, WordPress, and Google Business systems
- Designed scalable backend architecture and synchronization logic for multi-location operational management
- Developed mobile-friendly operational dashboards with production deployment infrastructure hosted on Render

Technologies: Next.js, TypeScript, Supabase, PostgreSQL, Square APIs, REST APIs, Render, Tailwind CSS

Custom E-Commerce Operations Platform

- Architected and implemented a custom e-commerce platform integrating Square payments, inventory systems, shipping workflows, and administrative tooling
- Developed backend operational logic for product management, order synchronization, reporting, and operational visibility
- Implemented production deployment workflows and infrastructure management

Technologies: Next.js, PostgreSQL, Square API, Supabase, REST APIs, Render

Automotive Customer Engagement & Campaign Automation Platform

- Designed and implemented a customer communication and campaign automation system for dealership operations to improve targeted outreach and customer retention
- Built segmented customer workflows using vehicle ownership history, service intervals, purchase timelines, and customer profile data to automate personalized marketing campaigns
- Streamlined outbound communication processes by automating campaign scheduling, customer targeting, and follow-up workflows across multiple dealership departments
- Improved operational efficiency by reducing manual campaign management and enabling more data-driven customer engagement strategies
- Coordinated integrations between dealership operational systems and communication platforms to support scalable marketing automation workflows

Technologies: CRM Systems, Customer Segmentation, Workflow Automation, Data Analysis, Email Campaign Systems, Operational Reporting

NFL & NBA Machine Learning Predictor

- Developed machine learning models using linear regression and Random Forest algorithms to predict professional sports outcomes using historical statistical datasets
- Built data processing workflows and predictive analysis pipelines to evaluate model performance and improve forecasting accuracy
- Implemented statistical modeling techniques and performance tracking systems for prediction analysis

Technologies: Python, Pandas, Scikit-learn, SQL, Data Analysis, Machine Learning

EDUCATION

West Virginia University, Bachelor of Science in Computer Science

2021 — 2025

- EcoCAR EV Challenge Participant

ADDITIONAL INFORMATION

- Relocating to Charlotte, NC immediately
- Experience presenting technical solutions to both technical and non-technical stakeholders
- Production experience with real-world multi-location operational systems
- Strong background working in fast-paced operational environments
